

A Software Testing Training Course – Best in Person QA Training

We always strive to give back the knowledge that we gain from our experiences to the testing fraternity. To extend the same philosophy, we are coming up with a **more structured curriculum** in the form of a Software testing course.

It is going to include everything there is to know for you to **become a perfect Software Tester**. This software testing QA training course is designed by working professionals in a way that, over the course of 40+ hours it will progress from introducing you to the basics of software testing to advanced topics like Software configuration management, creating a test plan, test estimations etc. along with introduction and familiarity with Automation testing and tools like QTP and QC.

What You Will Learn:

Who is this QA Software Testing Training Course for?

This software testing course is the perfect opportunity for all those who are looking for Software Testing (basics + advanced) training. If you are new to the IT field, want to increase your software testing knowledge, and want to pursue a career in Testing or if you want to make a career move from a different technology, this course is just for you. See course details below.

In this course we will teach you the most practical things required for you to get and survive a software testing job.

- If you are a just college pass out, this is EXACTLY what you are looking for to open the doors for your dream career
- If you are an experienced professional from ANY other field but wanted to be in IT, this course will help you make this switch smoothly
- If you are an experienced testing professional, you will be amazed with the new things and advanced tactics you will learn to work efficiently and smartly in this field.

The Online QA Testing Course Benefits:

1. **Syllabus:** We came up with a unique list of topics that will help you gradually work your way into the testing world. It not just includes the traditional testing methodologies but will give you a glimpse of the ways of testing that are coming up.
2. **Interactive:** It is going to be completely interactive. Our aim is to make each class feel like a brainstorming session.
3. **Practice sessions:** With each topic, we will give you assignments in a way that you will get to apply the theory you learnt immediately.

4. **Communication improvement:** We believe that a tester's expertise should have a reach that is beyond the technical knowledge. Through this software testing course we want to train you on how to be an over IT professional and not just a tester. Your verbal and written communication skills are going to be vastly improved through this course because we are going to interact on a regular basis.
5. **Resume Support and Interview preparation:** We will review your resume and let you know how you can make it more effective. We will not just give you a list of interview questions, we will go over them with you and make you job ready.
6. **Support:** Our Team is going to be available to you via email or the website for you to reach out to us
